

IMPORTING DATA IN PYTHON I

**Welcome to the  
course!**

# Import data

- Flat files, e.g. .txts, .csvs
- Files from other software
- Relational databases

# Plain text files

# Table data

titanic.csv

				row
				↓
Name	Sex	Cabin	Survived	
Braund, Mr. Owen Harris	male	NaN	0	
Cumings, Mrs. John Bradley	female	C85	1	
Heikkinen, Miss. Laina	female	NaN	1	
Futrelle, Mrs. Jacques Heath	female	C123	1	
Allen, Mr. William Henry	male	NaN	0	
				column
				↑

- Flat file

# Reading a text file

```
In [1]: filename = 'huck_finn.txt'

In [2]: file = open(filename, mode='r') # 'r' is to read

In [3]: text = file.read()

In [4]: file.close()
```

# Printing a text file

```
In [5]: print(text)
YOU don't know about me without you have read a book by the
name of The Adventures of Tom Sawyer; but that ain't no
matter. That book was made by Mr. Mark Twain, and he told
the truth, mainly. There was things which he stretched, but
mainly he told the truth. That is nothing. never seen
anybody but lied one time or another, without it was Aunt
Polly, or the widow, or maybe Mary. Aunt Polly--Tom's Aunt
Polly, she is--and Mary, and the Widow Douglas is all told
about in that book, which is mostly a true book, with some
stretchers, as I said before.
```

# Writing to a file

```
In [1]: filename = 'huck_finn.txt'
```

```
In [2]: file = open(filename, mode='w') # 'w' is to write
```

```
In [3]: file.close()
```

# Context manager with

```
In [1]: with open('huck_finn.txt', 'r') as file:  
....:     print(file.read())
```

YOU don't know about me without you have read a book by the name of The Adventures of Tom Sawyer; but that ain't no matter. That book was made by Mr. Mark Twain, and he told the truth, mainly. There was things which he stretched, but mainly he told the truth. That is nothing. never seen anybody but lied one time or another, without it was Aunt Polly, or the widow, or maybe Mary. Aunt Polly--Tom's Aunt Polly, she is--and Mary, and the Widow Douglas is all told about in that book, which is mostly a true book, with some stretchers, as I said before.

# In the exercises, you'll:

- Print files to the console
- Print specific lines
- Discuss flat files

IMPORTING DATA IN PYTHON I

**Let's practice!**

IMPORTING DATA IN PYTHON I

# **The importance of flat files in data science**

# Flat files

titanic.csv

image

# How do you import flat files?

- Two main packages: NumPy, pandas

pandas

$$y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$$

- Here, you'll learn to import:
  - Flat files with numerical data (MNIST)
  - Flat files with numerical data and strings (titanic.csv)

IMPORTING DATA IN PYTHON I

**Let's practice!**

IMPORTING DATA IN PYTHON I

# Importing flat files using NumPy

# Why NumPy?

- NumPy arrays: standard for storing numerical data
- Essential for other packages: e.g. scikit-learn

- `loadtxt()`
- `genfromtxt()`

# Importing flat files using NumPy

```
In [1]: import numpy as np
```

```
In [2]: filename = 'MNIST.txt'
```

```
In [3]: data = np.loadtxt(filename, delimiter=',')
```

```
In [4]: data
```

```
Out[4]:
```

```
[[ 0.  0.  0.  0.  0.]
 [ 86. 250. 254. 254. 254.]
 [ 0.  0.  0.  9. 254.]
 ...,
 [ 0.  0.  0.  0.  0.]
 [ 0.  0.  0.  0.  0.]
 [ 0.  0.  0.  0.  0.]]
```

# Customizing your NumPy import

```
In [1]: import numpy as np
```

```
In [2]: filename = 'MNIST_header.txt'
```

```
In [3]: data = np.loadtxt(filename, delimiter=',',  
skiprows=1)
```

```
In [4]: print(data)
```

```
[[ 0.  0.  0.  0.  0.]  
 [ 86. 250. 254. 254. 254.]  
 [ 0.  0.  0.  9. 254.]  
 ...,  
 [ 0.  0.  0.  0.  0.]  
 [ 0.  0.  0.  0.  0.]  
 [ 0.  0.  0.  0.  0.]]
```

# Customizing your NumPy import

```
In [1]: import numpy as np
```

```
In [2]: filename = 'MNIST_header.txt'
```

```
In [3]: data = np.loadtxt(filename, delimiter=',', skiprows=1,  
usecols=[0, 2])
```

```
In [4]: print(data)
```

```
[[ 0.  0.]  
 [86. 254.]  
 [ 0.  0.]  
 ...,  
 [ 0.  0.]  
 [ 0.  0.]  
 [ 0.  0.]]
```

# Customizing your NumPy import

```
In [1]: data = np.loadtxt(filename, delimiter=',',  
dtype=str)
```

# Mixed datatypes

titanic.csv

Name	Gender	Cabin	Fare
Braund, Mr. Owen Harris	male	NaN	7.3
Cumings, Mrs. John Bradley	female	C85	71.3
Heikkinen, Miss. Laina	female	NaN	8.0
Futrelle, Mrs. Jacques Heath	female	C123	53.1
Allen, Mr. William Henry	male	NaN	8.05

↑  
strings

↑  
floats

IMPORTING DATA IN PYTHON I

**Let's practice!**

IMPORTING DATA IN PYTHON I

# Importing flat files using pandas

# What a data scientist needs

- Two-dimensional labeled data structure(s)
- Columns of potentially different types
- Manipulate, slice, reshape, groupby, join, merge
- Perform statistics
- Work with time series data

# Pandas and the DataFrame

Wes McKinney

## pandas

$$y_{it} = \beta' x_{it} + \mu_i + \epsilon_{it}$$

# Pandas and the DataFrame

What problem does *pandas* solve?

---

Python has long been great for data munging and preparation, but less so for data analysis and modeling. *pandas* helps fill this gap, enabling you to carry out your entire data analysis workflow in Python without having to switch to a more domain specific language like R.

- DataFrame = pythonic analog of R's data frame

# Pandas and the DataFrame

# Manipulating pandas DataFrames

- Exploratory data analysis
- Data wrangling
- Data preprocessing
- Building models
- Visualization
- Standard and best practice to use pandas

# Importing using pandas

```
In [1]: import pandas as pd
```

```
In [2]: filename = 'winequality-red.csv'
```

```
In [3]: data = pd.read_csv(filename)
```

```
In [4]: data.head()
```

```
Out[4]:
```

	volatile acidity	citric acid	residual sugar
0	0.70	0.00	1.9
1	0.88	0.00	2.6
2	0.76	0.04	2.3
3	0.28	0.56	1.9
4	0.70	0.00	1.9

```
In [5]: data_array = data.values
```

# You'll experience:

- Importing flat files in a straightforward manner
- Importing flat files with issues such as comments and missing values

IMPORTING DATA IN PYTHON I

**Let's practice!**

IMPORTING DATA IN PYTHON I

# **Final thoughts on data import**

# Next chapters:

- Import other file types:
  - Excel, SAS, Stata
- Feather

**Wes McKinney**  
@wesmckinn

Following

Announcing Feather: A fast, language-agnostic data frame file format, by [@hadleywickham](#) and [@wesmckinn](#)

- Interact with relational databases

# Next course:

- Scrape data from the web
- Interact with APIs

IMPORTING DATA IN PYTHON I

# Congratulations!
